

## Joomla 1.5.14 Security Release Now Available

Keeping Joomla! up to date is the first step in security.

The folks at Joomla.org are constantly busy working on the next official release of Joomla! and the next update patch to fix security holes and add features. If your installation of Joomla! is out of date (as of now below version 1.0.15 or 1.5.14) then it could be open to hackers and other web exploits.

SuperHouse media can upgrade your Joomla! installation to the latest version and perform a security audit on your website, contact us for an estimate and we will get started ASAP!

The Joomla Project announces the immediate availability of Joomla 1.5.14 [Wojmamni ama naiki]. This release contains fixes for two material bugs that were introduced in version 1.5.13 and one low level security issue. Instead of waiting for a normal 6 to 8-week release cycle, this release is being made available to users now. It has been eight days since Joomla 1.5.13 was released on July 22, 2009.

The Development Working Group's goal is to continue to provide regular, frequent updates to the Joomla community.
